

CLAIMS

What is claimed is:

- 5 1. A potentially elastic interlaced-textured yarn, comprising:
 a potentially crimped yarn with a monofilament fineness of one to
 six deniers and a total fineness of 20 to 300 deniers ; and
 an ultrafine yarn with the monofilament fineness of 0.01 to 0.5
 deniers and the total fineness of 30 to 300 deniers,
10 whereby, one or two strands of the ultrafine yarn is interlaced
 with plies the potentially crimped yarn.
2. The potentially elastic interlaced-textured yarn as set forth
 in claim 1, wherein the potentially crimped yarn comprises a side-by-
15 side type composite filaments having two kinds of polymers including
 polyethylene terephthalate and polytrimethylene terephthalate.
3. The potentially elastic interlaced-textured yarn as set forth
 in claim 1, wherein the ultrafine yarn is selected from the group
20 consisting of a sea-island type composite filaments, a radial type
 composite filaments and a very fine yarn produced through a direct
 spinning process.
4. The potentially elastic interlaced-textured yarn as set forth
25 in claim 1, wherein a potentially crimped yarn content is 11 to 67 wt%

based on a weight of the ultrafine yarn.

5. An elastic suede-like woven fabric with elongation of 10 to 40 % and elongation recovery of 80 % or more, comprising the potentially
5 elastic interlaced-textured yarn as set forth in any one of claims 1 to 4.
